

SOLIDEAL COMPACTOR

THE NATURAL
CHOICE

The new SOLIDEAL COMPACTOR tyre is specifically built for the most demanding of Highway Building applications.

Bias ply construction coupled with belt breakers ensures equal distribution of ground pressure across the tyre, combined with high stability and steerability.

The smooth tread and rounded shoulders give optimum compaction with minimal grooving.

The specially designed tread compound reduces the amount of loose road material that will stick to the tyre.

This natural rubber compound optimises tread life even under high temperature conditions.

Natural rubber compounds last longer for COMPACTOR C1 tyres.
